EXPERIENCE

ODOO DEVELOPER

Laxicon Solution

2023 - Present

In this company I have worked across projects such as Rental Management System, Bridal Management System, E-Way Bill & Invoice, Tailor Management System, Employee Biomax Integration, and Hospital Management System.

Rental Management System : In this project, I have added functionality like WhatsApp integration, reports, and biometric attendance. This product is designed for rent-to-own businesses. which manage product stock warehouse-wise. And it has other functionalities like daily cashbook, invoicing, purchase, contact, etc.

Bridal Management System : This Project I Made From Crash for Gj-5 Bridal Studio. This Project Helps Them to Create New Packages. With the help of a Package, They Can Create a Record That Contains the New Customer's Data. How Many Visits Are Made to This Package? How Many Visits Are Left? How Much Has Been Paid? And the Rest. When the Order Is Confirmed, the Customer Receives a Message on Whatsapp. The Message Contains the Details of the Order. This Project Has Functionalities Like Daily Cashbooks, Backups, and Order Detail Reports.

Tailor : I Made This Project From Crash for Jelli Taylor. In This Project, They Required That They Store Their Measurements in the Customer Table So That if the Same Customer Orders Next Time, They Don't Have to Take the Measurements Again. In the Form View of the Company. A Jelly Tailor Was Given a Page on Which the Price of Pants, Shirts, Dhoti, Pathani, Safari, and Kurto Can Be Entered. In the Form for Making Records, Columns Like Customer's Name, Address, Mobile Number, Etc. Are Given. Which Is Required. And Checkboxes Are Given Below It. For Pants, Shirts, Kurto, Pathani, and Dhoti, the Selected Option Is Taken and the Customer's Map Can Be Added to It. In This Form, There Is No Option for One Note if Other Required Details Like a Shirt Open or Not, Collar Type, Pocket, Shoulder Type, Bib Patti, Belt, Grip, Slit Pocket, and Khichi Are Not Available. In Which All the Details Can Be Entered. Once the Record Is Done, When the Product Is Ready, the Product Can Be Ready. The Record Can Be Delivered After the Product Is Ready.

E-Way Bill & Invoice : In This Project, I Have Done API Integration. Done With the Help of <https://mygstcafe.com/> Which Provides GST API. With the Help of Which E-invoice and the E-way Bill Can Be Generated. Which Is Directly Added Through the GST Portal.
